# Survey map 1:2 100 000 of the Kola Peninsula after A. Petrelius expeditions (1887, 1889)

# The most accurate is the unpublished Map of Vegetation of Kola Peninsula, scale 1:1 000 000 (Chernov, 1954)

## Legend for tundra zone

- Lichen tundra,
- Dwarf shrubs-lichens tundra,
- Shrub tundra,
- Shrub-lichen tundra,
- Lapland aapa-fens,
- Sedges and Sphagna fens,
- Dwarf shrubs and Sphagna palsia bogs

Dwarf shrubs, mosses and lichens  
dominated zonal plant communities  
of Fennoscandian tundra (Alliances  
*Loiseleurio-Diapension* and  
*Phyllodoco-Vaccinion myrtilli*)

★ Points of descriptions of dwarf shrubs (*Empetrum hermaphroditum*, *Betula nana*, *Vaccinium myrtillus*, *Calluna vulgaris*), mosses and lichens – dominated tundra vegetation (103 relevès)

Sweden

Norway

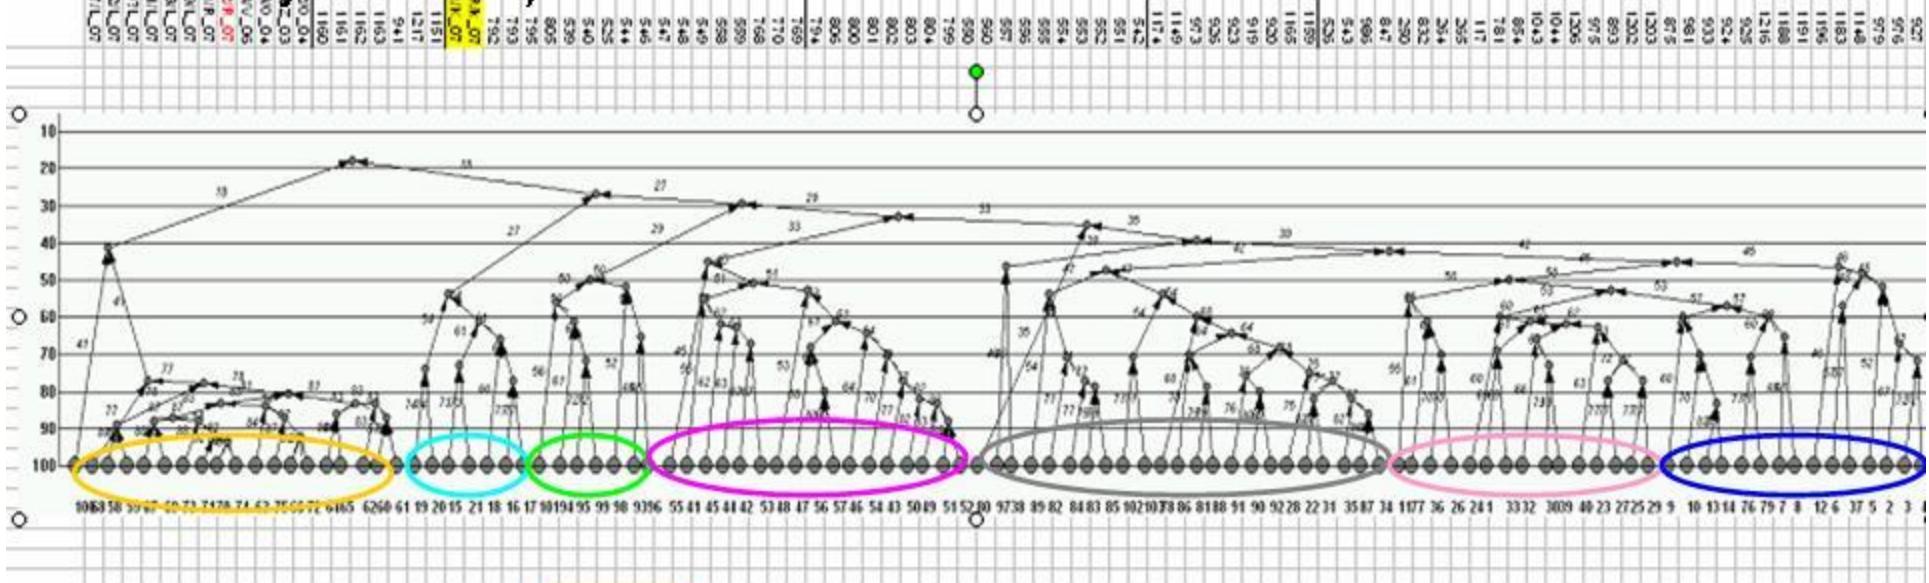

Finland

Kola  
Peninsula

Russia

*Empetrum hermaphroditum*, *Betula nana*, *Vaccinium myrtillus*, *V. uliginosum*  
**dominated zonal tundra communities in the North of Fennoscandia, GRAPHS**  
**clustering of 103 relevés (average distance as a measure of similarity, Sørensen-Chekanovsky coefficient)**

Loiseleurio-Diapensietum  
*Racomitrietosum*  
*lanuginosii*

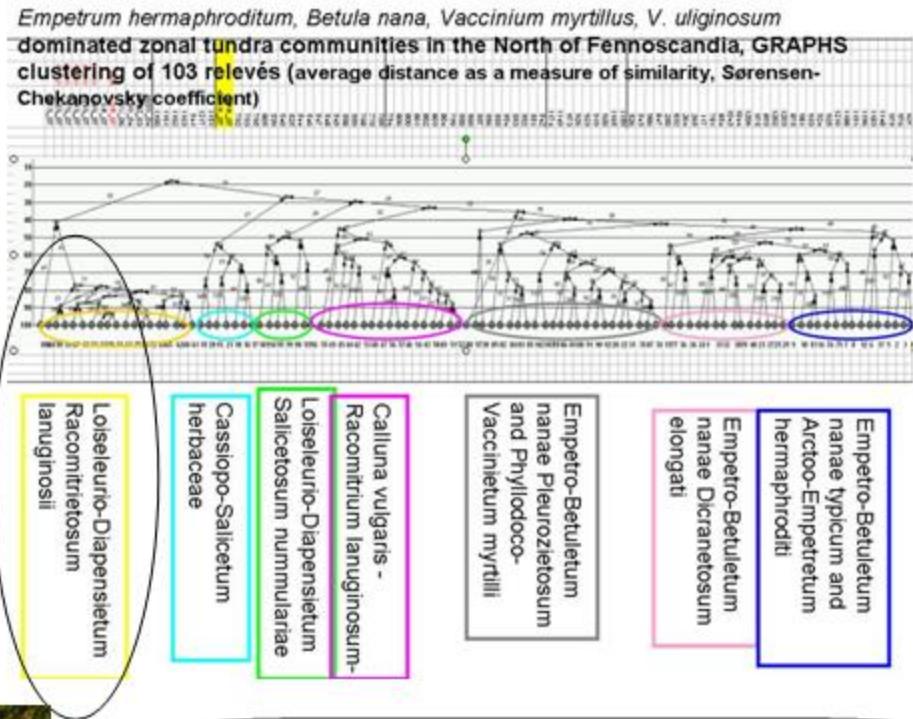

Calluna vulgaris -  
*Racomitrium lanuginosum*-  
*Loiseleurio-Diapensietum*  
*Salicetosum nummulariae*  
*Cassiopo-Salicetum*  
*herbaceae*

Empetro-Betuletum  
*nanae* *Pleurozietosum*  
*and Phyllodo-*  
*Vacciniietum myrtilli*

Empetro-Betuletum  
*nanae* *Dicranetosum*  
*Arctoo-Empetretum*  
*hermaphroditii*

## subass. *Loiseleurio-Diapensietum racomitrietosum lanuginosi*

Diagnostic taxa (DT) *Empetrum hermaphroditum* (D - Dominant), *Loiseleuria procumbens*, *Racomitrium lanuginosum* (D), *Sphaerophorus fragilis*, *Ochrolechia frigida*

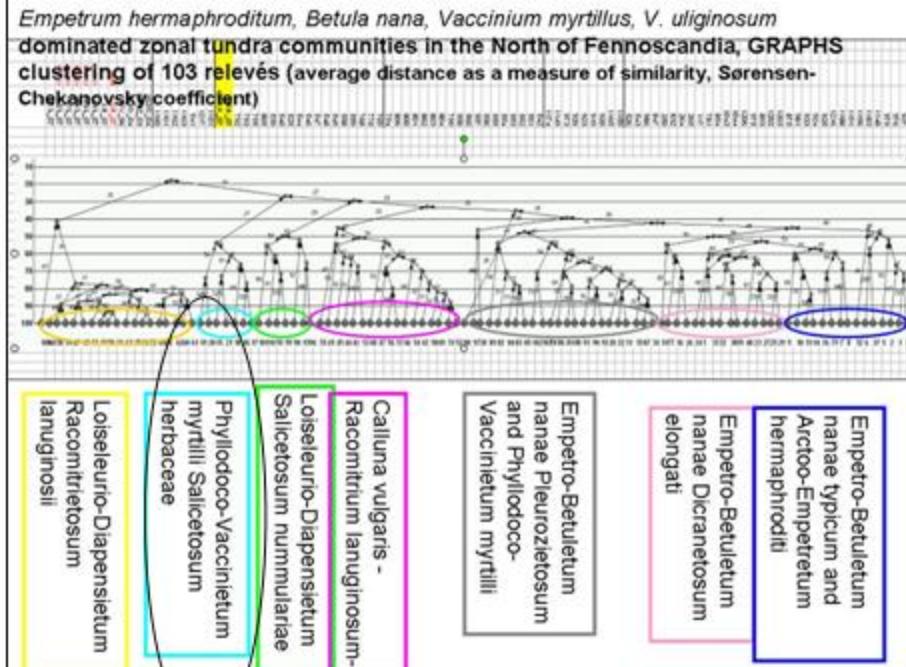

On the north-west of Fennoscandia

## subass. *Phyllodoco-* *Vaccinietum myrtilli* *salicetosum herbaceae*

DT *Salix herbacea*, *Kiaeria starkei*,  
*Vaccinium myrtillus* (D), *Avenella*  
*flexuosa*, *Barbilophozia lycopodioides*,  
*Orthocaulis kunzeanus*

On the whole Fennoscandia, but more common in the western part

## Subass. *Loiseleurio-Diapensietum salicetosum nummulariaeae*

DT *Salix nummularia*, *Flavocetraria nivalis*, *Bryocaulon divergens*,  
*Sphaerophorus fragilis*,  
*Ochrolechia frigida*

*Empetrum hermaphroditum*, *Betula nana*, *Vaccinium myrtillus*, *V. uliginosum* dominated zonal tundra communities in the North of Fennoscandia, GRAPHS clustering of 103 relevés (average distance as a measure of similarity, Sørensen-Chekanovsky coefficient)

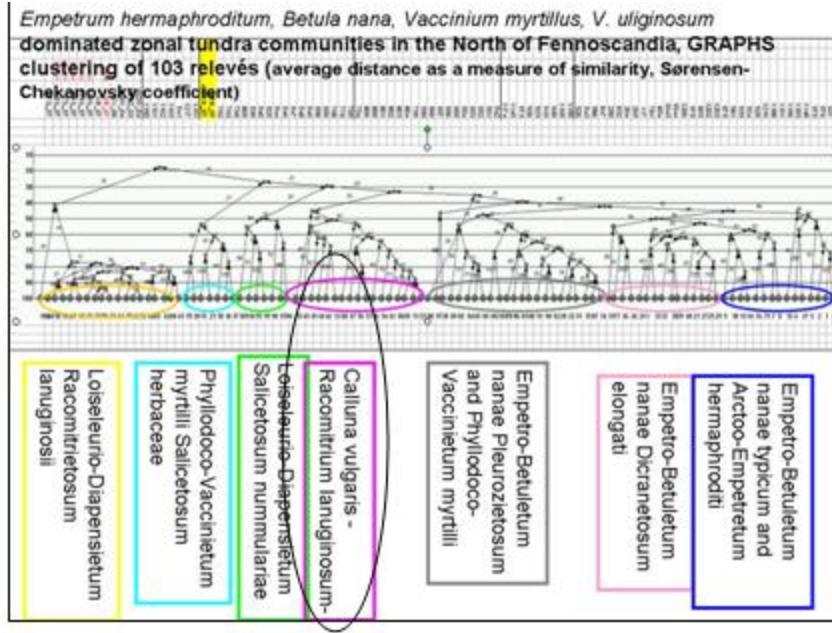

In the eastern part of Fennoscandia

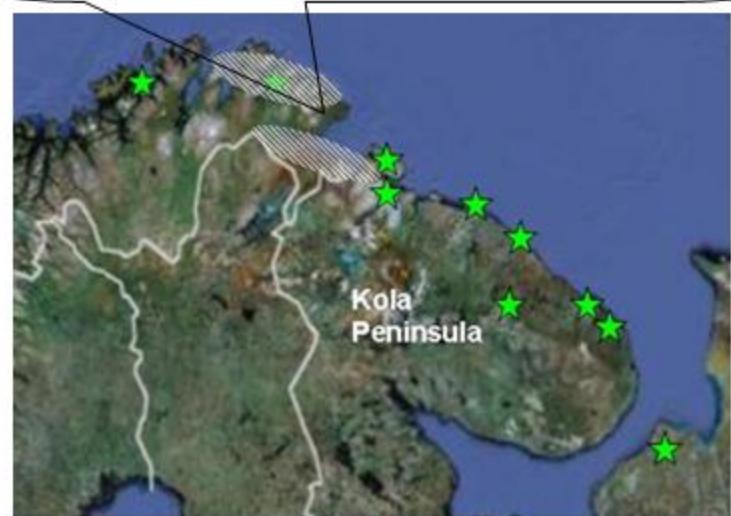

# Community type *Calluna vulgaris* – *Racomitrium lanuginosum*

DT *Calluna vulgaris* (D), *Hylocomium splendens*, *Racomitrium lanuginosum*

More common in the western part

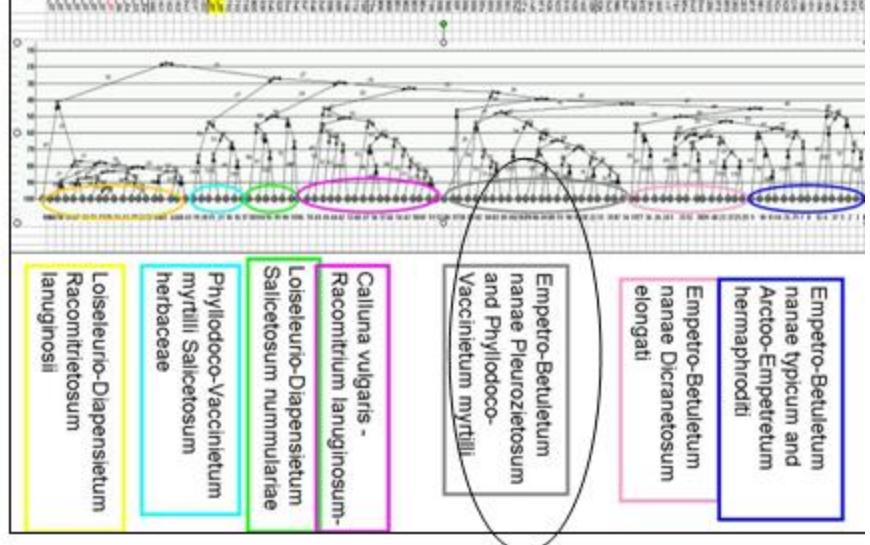

subass. *Empetrum-Betuletum nanae pleurozietosum* and ass.  
*Arctoo-Empetretum hermaphroditi*

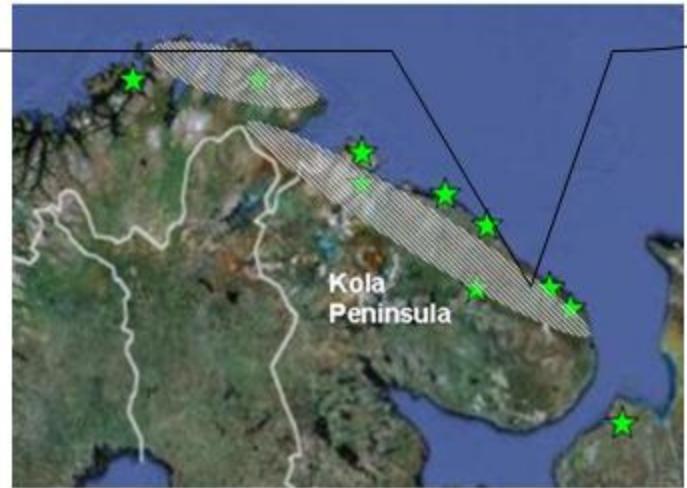

DT of the group: *Empetrum hermaphroditum* (D), *Arctous alpina*,  
*Chamaepericlymenum suecicum*,  
*Hylocomium splendens*, *Ptilidium ciliare*

*Empetrum hermaphroditum*, *Betula nana*, *Vaccinium myrtillus*, *V. uliginosum* dominated zonal tundra communities in the North of Fennoscandia, GRAPHS clustering of 103 relevés (average distance as a measure of similarity, Sørensen-Chekanovsky coefficient)

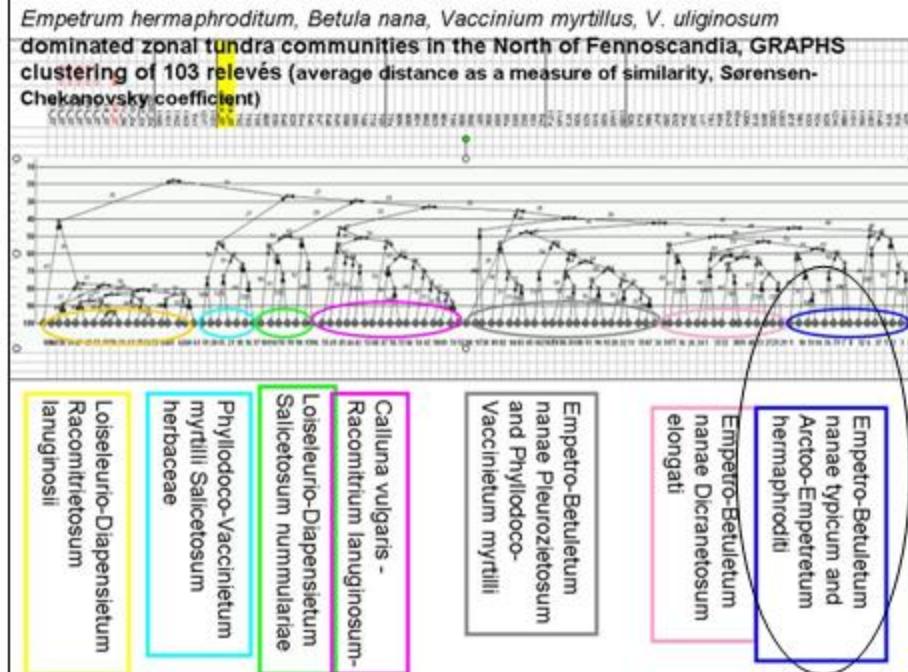

Throughout the all tundra zone

## subass. *Empetrum-Betuletum nanae typicum*

DT: *Empetrum hermaphroditum* (D),  
*Ptilidium ciliare*, *Cladonia arbuscula*,  
*C. stellaris*, *C. uncialis*

Throughout the all tundra zone

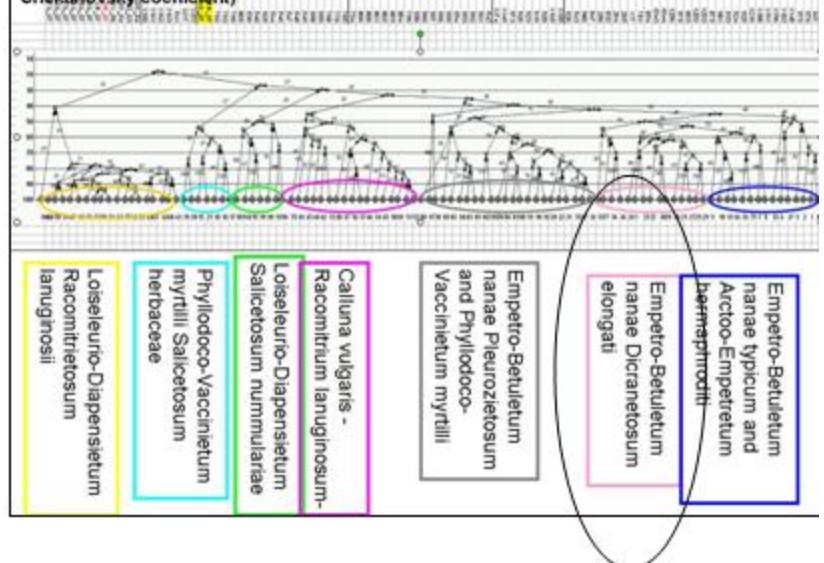

Transitional to tundra bogs are communities of subass.

## ***Empetrum-Betuletum nanae dicranetosum elongati***

DT: *Empetrum hermaphroditum* (D), *Rubus chamaemorus*, *Dicranum elongatum*

*Empetrum hermaphroditum*, *Betula nana*, *Vaccinium myrtillus*, *V. uliginosum* dominated zonal tundra communities in the North of Fennoscandia, GRAPHS clustering of 103 relevés (average distance as a measure of similarity, Sørensen-Chekanovsky coefficient)

Throughout the all tundra zone

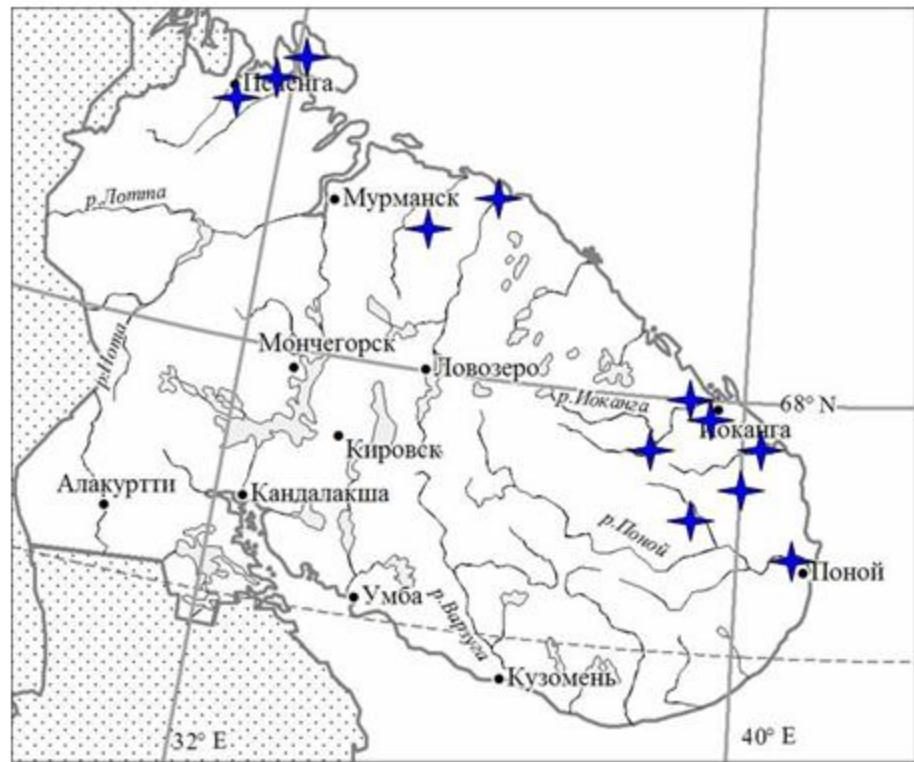

There is the longitudinal gradient in syntaxa distribution in tundra zone from the north-west to the south-east of Fennoscandia.

For All. *Loiseleurio-Diapension* this gradient is detected on the subassociations level. This alliance separates sub-arctic tundra from boreal forest in Fennoscandia.

Associations of All. *Phyllodoce-Vaccinion myrtilli* keep the constancy of diagnostic composition on longitudinal gradient and demonstrates common traits between tundra and boreal zones.

Communities of All. *Cassiopo—Salicion herbaceae* (and transitional to this from All. *Phyllodoce-Vaccinion myrtilli*) are well-represented throughout all tundra zone of Fennoscandia. They are common and extensive in the western part and become rare and scanty eastwards.

Bogs and fens of  
tundra zone of Kola  
Peninsula  
(Alliances *Oxycocco-*  
*Empetrium*  
*hermaphroditii*,  
*Caricion rotundatae*  
and *Sphagno*  
*warnstorffii-*  
*Tomentypnion* )

Areas of descriptions of bogs  
and fens in tundra zone of Kola  
Peninsula (54 relevès)

*Ombrotrophy,  
oligotrophy*

All. *Oxycocco  
(microcarpi)-  
Empetrium  
hermaphroditum*

DT: *Rubus chamaemorus*,  
*Sphagnum fuscum*,  
*Eriophorum vaginatum*,  
*Andromeda polifolia*,  
*Orthocaulis kunzeanus*,  
*Mylia anomala*,  
*Oxycoccus microcarpus*,  
*Ledum palustre*,  
*Dicranum Bergeri*

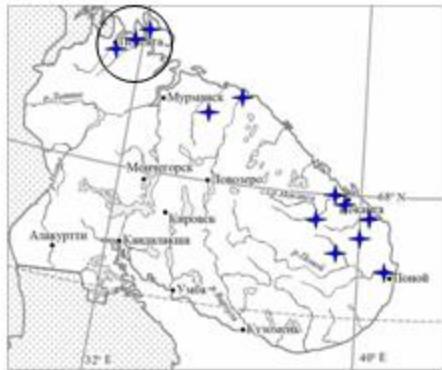

*Minerotrophy,  
meso-eu-trophy*

All. *Caricion  
rotundatae*

DT: *Carex stans*,  
*Carex rariflora*,  
*Carex rotundata*,  
*Baeothryon cespitosum*,  
*Eriophorum polystachion*,  
*Eriophorum russeolum*,  
*Sphagnum lindbergii*,  
*Sphagnum compactum*,  
*Warnstorfia exannulata*,  
*Warnstorfia sarmentosa*,  
*Straminergon  
stramineum*

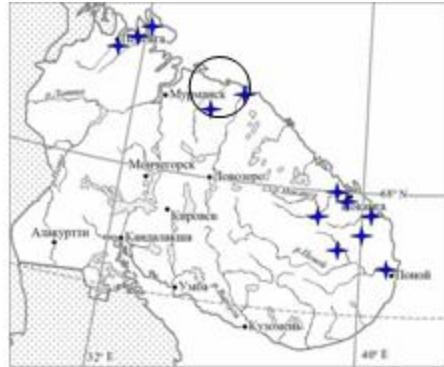

All. *Sphagno  
warnstorffii-  
Tomenthypnion*

DT: *Salix myrsinoides*,  
*Potentilla erecta*,  
*Molinia caerulea*, *Carex  
dioica*, *Comarum  
palustre*, *Saussurea  
alpina*, *Pinguicula  
alpina*, *Pinguicula  
vulgaris*, *Bartsia alpina*,  
*Selaginella  
selaginoides*,  
*Equisetum palustre*,  
*Aulacomnium palustre*,  
*Sphagnum warnstorffii*,  
*Lophozia longiflora*

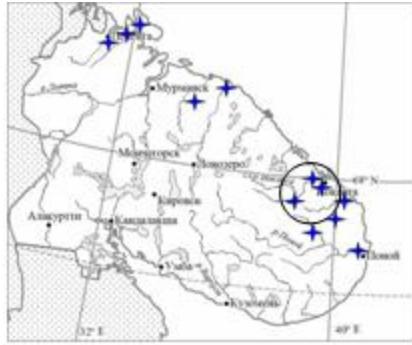

On the Fisher (Rybatskiy) Peninsula there were described flat-palsa complex bogs and fens

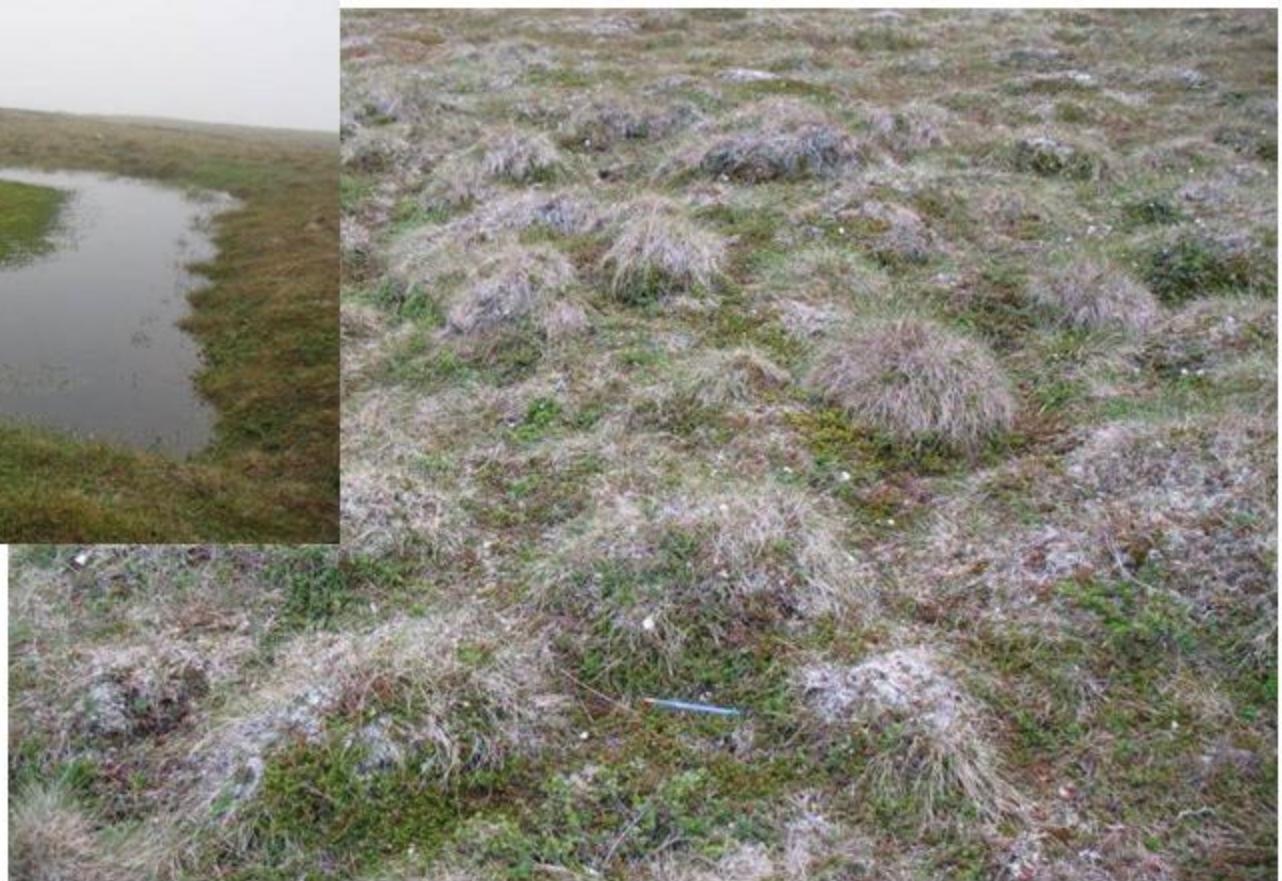

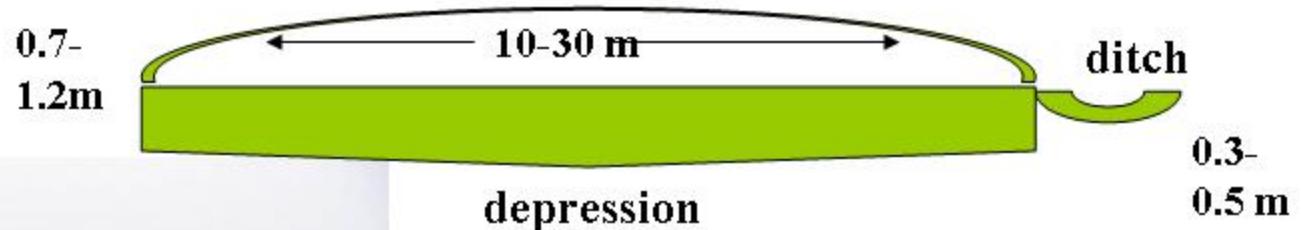

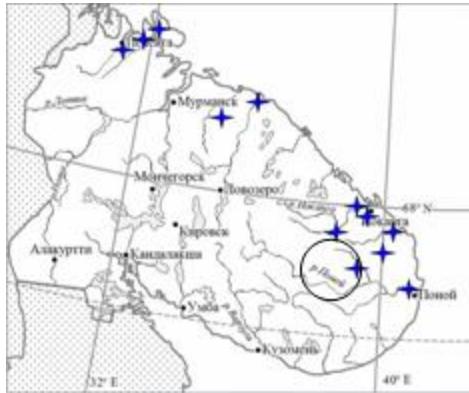

In the Teriberka valley  
there were found  
pounikkos-and-flarks  
complexes

On the east of Kola Peninsula there were described flat palsa-and-flarks complexes

On the southern border of tundra zone there occur palsa-and-flark-lawn complexes

Picture of Petrova Olga

All. *Oxycocco-Empetrium hermaphroditii* shows essential stability of DT composition on both latitudinal and longitudinal gradients of ombrotrophic and oligotrophic bogs in Fennoscandia.

The type '***Empetrum-Dicranetum elongatae, Racomitrium lanuginosum*** noda' is specific for oligotrophic bog in the north-western part of Fennoscandia (Vorren, 1979)

All. *Caricion rotundatae* is supposed to separate tundra zone from boreal forest. Meso-, eutrophic fens of boreal zone are characterized by All. *Caricion lasiocarpae* and *Rhynchosporion albae*

★ Areas of descriptions of seashore vegetation (81 relevè)

Seashore marshes - All. *Puccinellion phryganodis* and All. *Caricion glareosae*

Sandy and shingle beaches - All. *Honckenyo–Elymion arenariae*

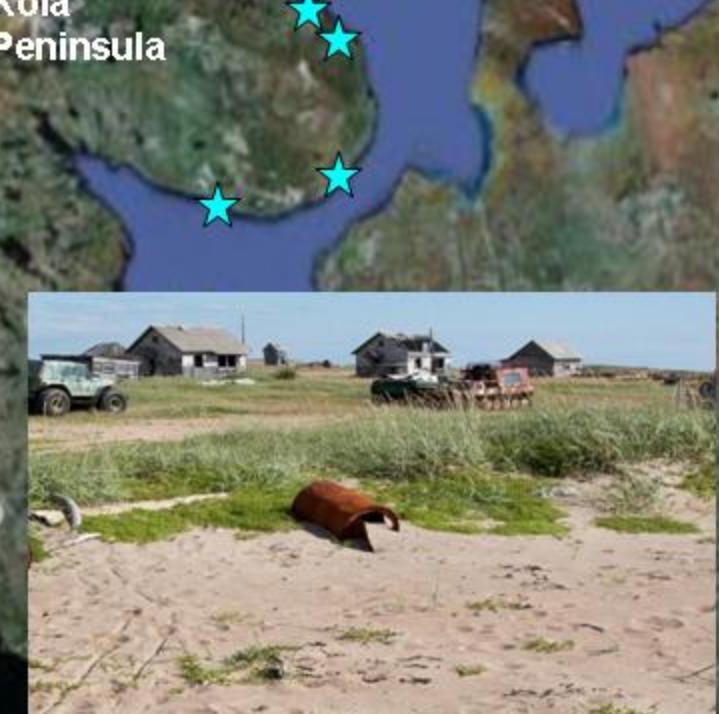

Sweden

Finland

Хельсинки

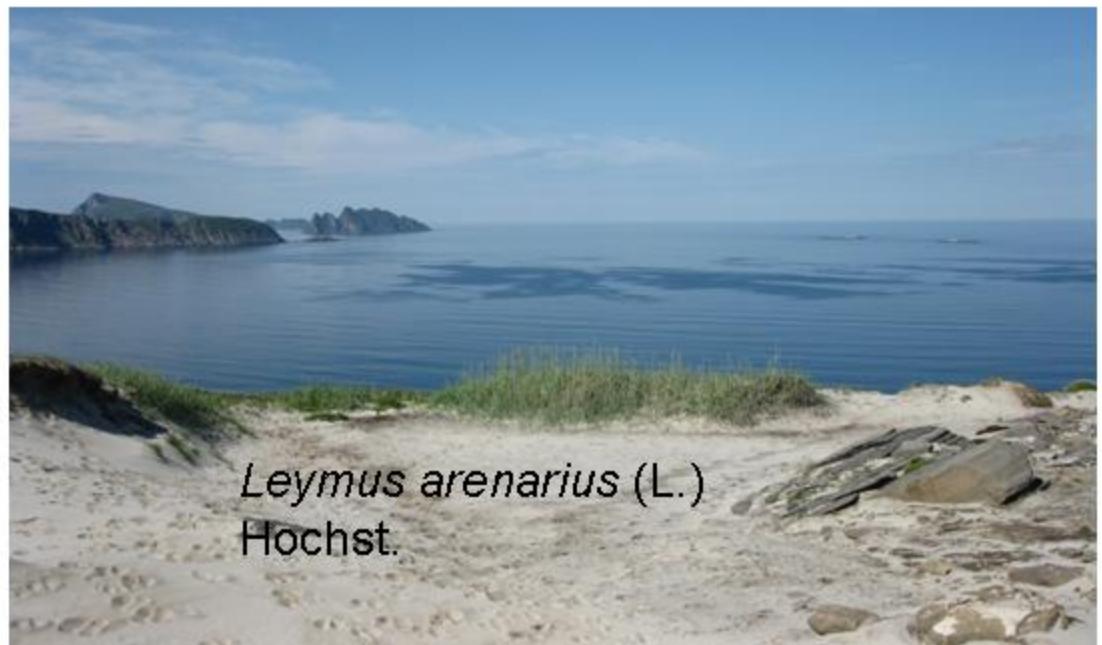

*Stellaria humifusa*  
Rottb.

*Arctanthemum hultenii* (A. et D. Löve Tzvel.

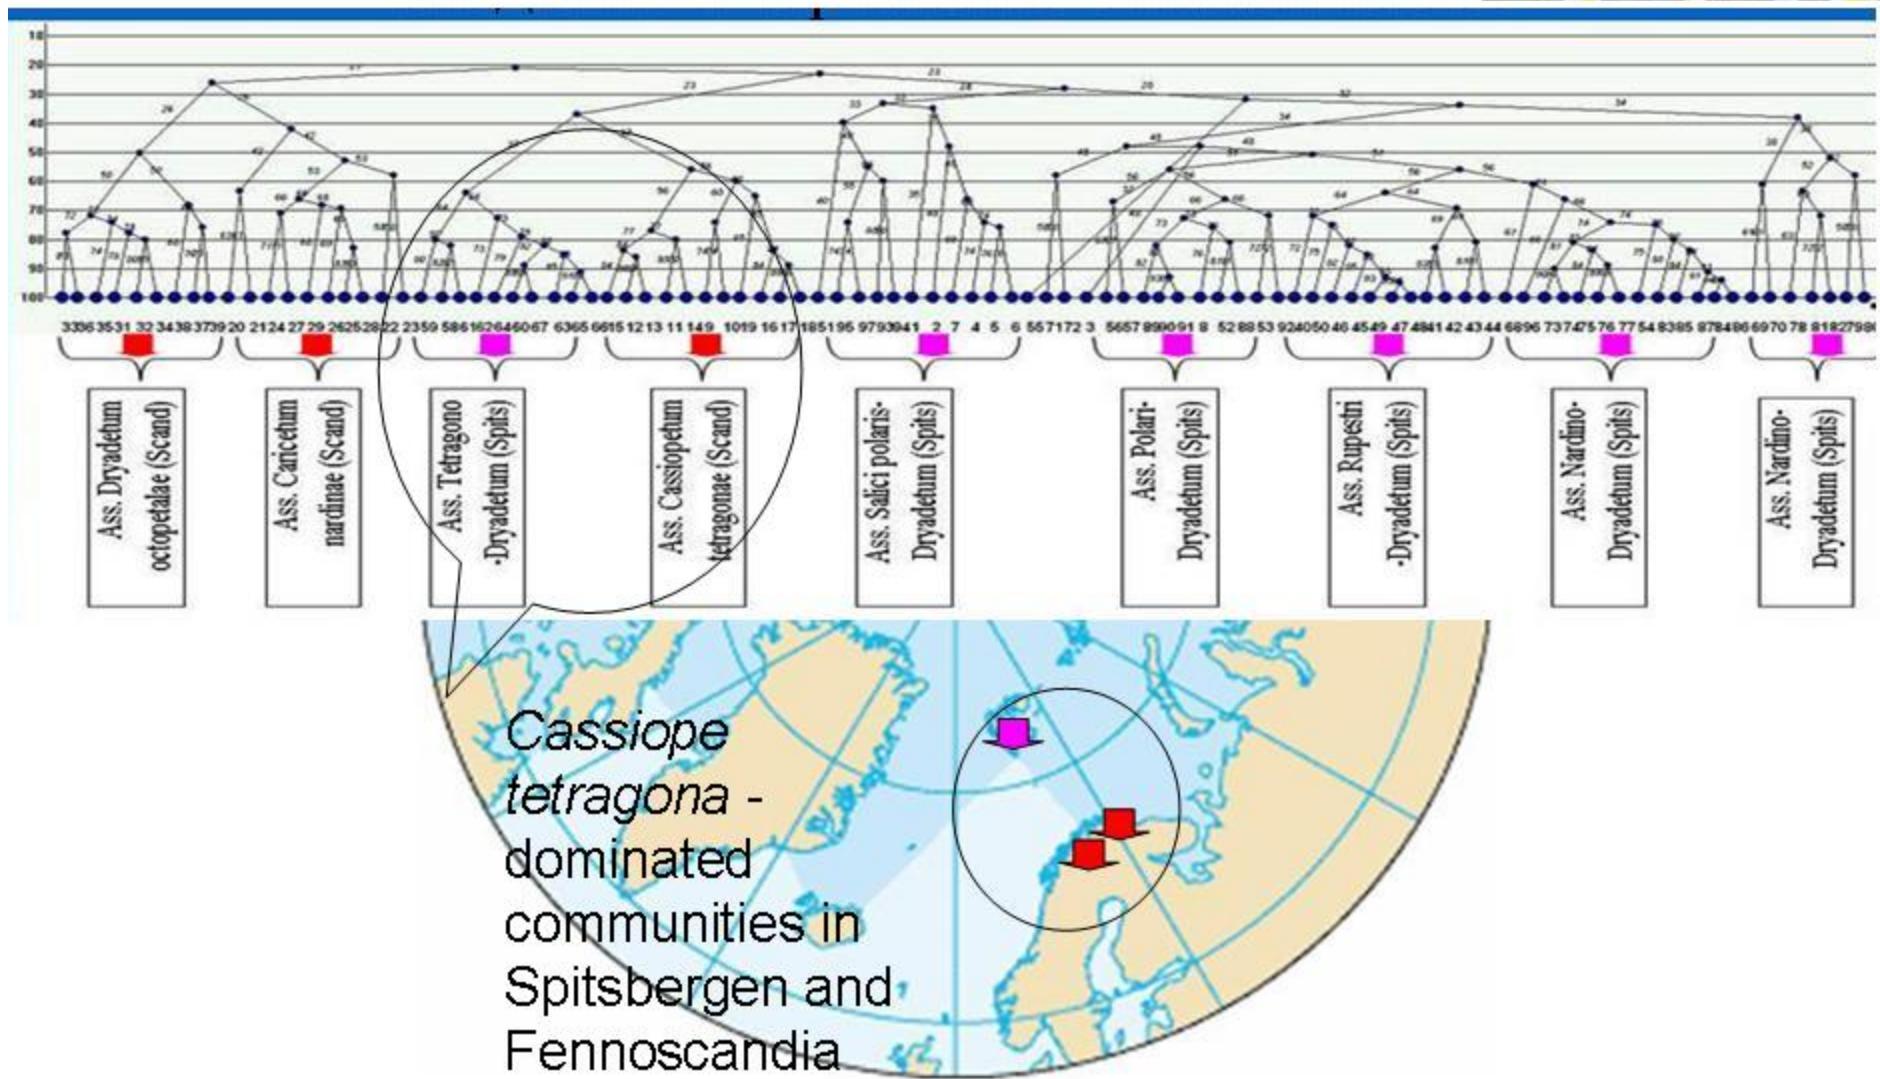

*Leymus arenarius* (L.)  
Hochst.

**Zone of Arctic seashores –**  
*Puccinellion phryganodis* and *Caricion glareosae*, Honckenyo–Elymion arenariae

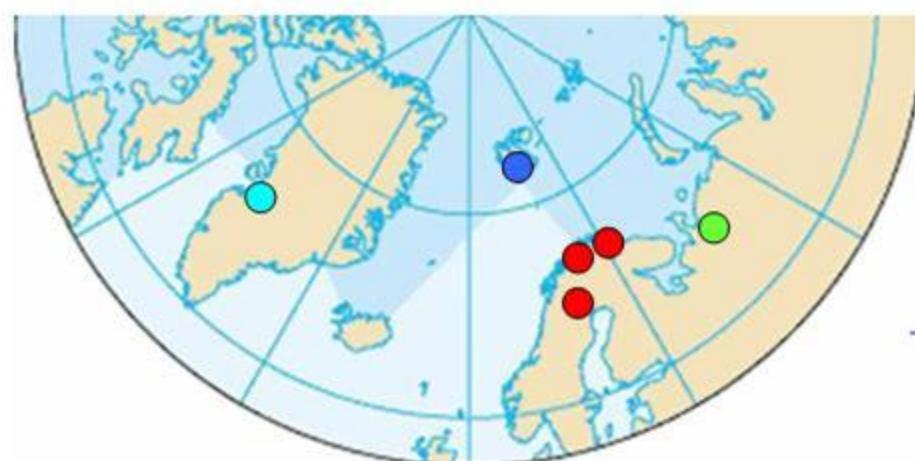

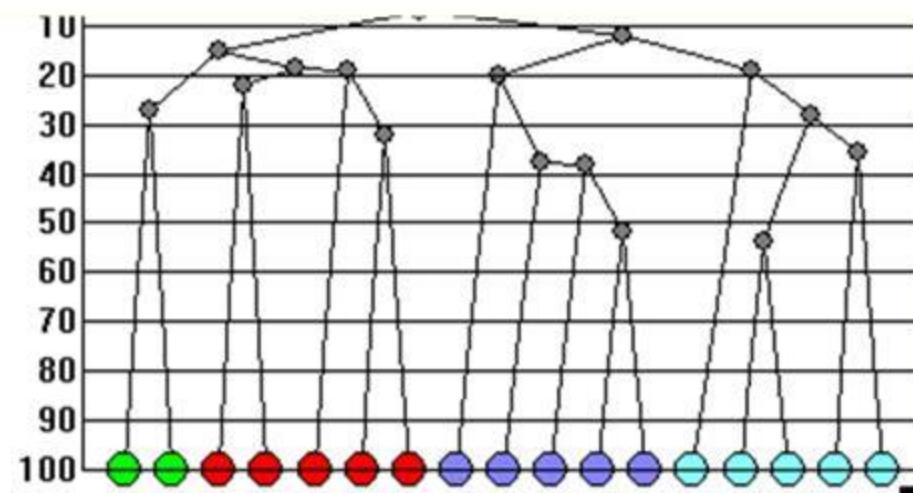

**Zone of sub-Arctic seashores –**  
*Puccinellion phryganodis*, *Caricion glareosae*,  
Honckenyo–Elymion arenariae.

**Zone of Atlantic boreal seashores –**  
*Ruppion maritimae*, *Zosterion maritimae*, *Puccinellion maritimae*, *Armerion maritimae*, *Agropyro-Rumicion*,  
*Agropyro-Minuartion peploidis*, *Thero-Salicornion*,  
*Scirpion maritimae*.

# *Dryas octopetala*, *Carex hepburnii* and *Cassiope tetragona*-dominated communities on Kola Peninsula and Spitsbergen and results of GRAPHS clusterization (123 relevés)

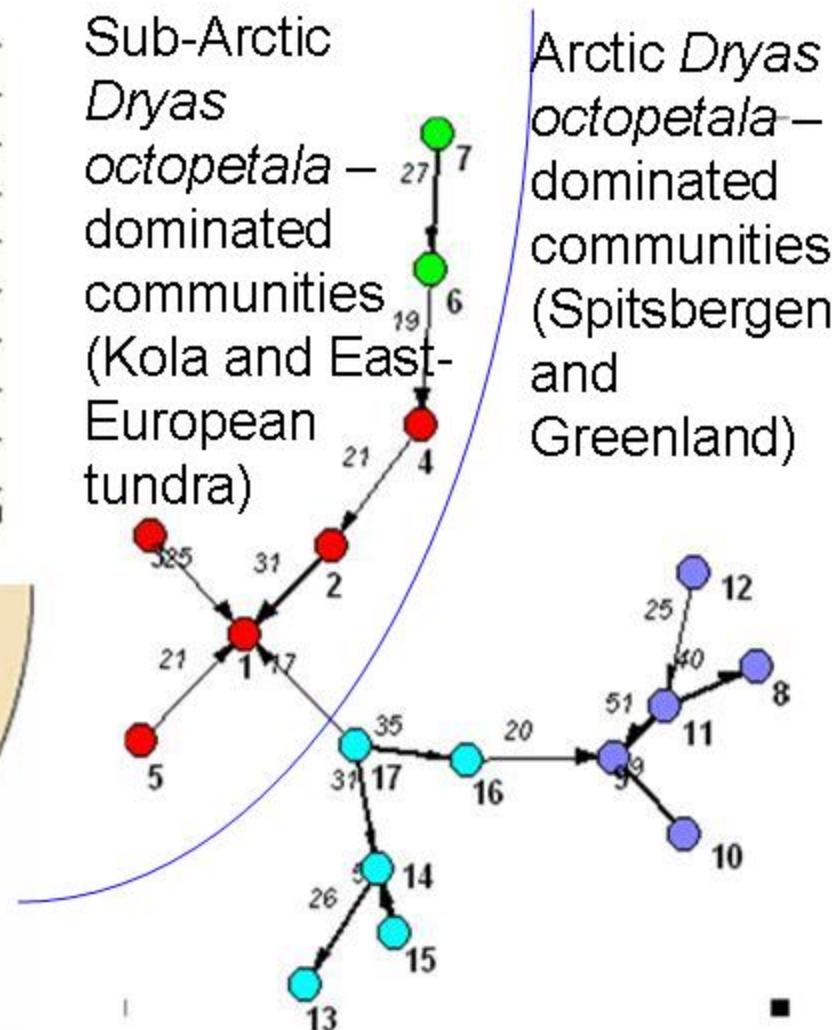

# Dendrogram and dendrite of similarity of associations of *Dryas octopetala*, *Carex hepburnii*, *Cassiope tetragona*-dominated plant communities, after GRAPHS clusterization

Sub-Arctic  
*Dryas octopetala* – dominated communities (Kola and East-European tundra)

Arctic *Dryas octopetala* – dominated communities (Spitsbergen and Greenland)

- Syntaxonomical databases, numerical techniques of their treatment and Braun-Blanquet approach to their classification are of great importance to discover regional geographical structure of Arctic vegetation.
- Not only zonal vegetation differentiation, but also traits of azonal vegetation (mires, seashore communities etc.) provide good basis for both zonal and regional Arctic and sub-Arctic differentiation.
